### SCHEDULE APPOINTMENT

⚠ Your local store has been updated to match you with the closest specialist.

Select a date and the best time frame for your in-home measure

---

**Select an Appointment Date and Time Frame**

The measurement will take an average of 30 minutes to 1 hour to complete, depending on the number of areas you specified. The installer will arrive during the time frame you select.

Appointment Date 

Time Frame 

**Please Note:** If you have questions about the available date please call your local store.

Continue

#### What to Expect

- 1 Before the Installer arrives they'll confirm your measurement appointment and arrival time by phone based on the time frame you selected.
- 2 After the measurement has been taken and products have been selected, you'll receive your inclusive quote. To speed up the process, please include your product selection in the Additional Information section.
- 3 Once the quote has been accepted, and products and services purchased, the independent installer will contact you to schedule the installation.

## Prototyping

The new application can run on mobile platforms. Developers need to publish their apps on mobile platforms. Simply integrate a responsive web page to easily launch the app on a mobile platform, and resize the web page to fit the screen of your mobile phone, allowing users to see all or any perspective of your website or application. can do. clearly. This is the perfect developer to use responsive websites. This website can fit the website to the size of your mobile phone and will run smoothly on your mobile platform without major problems.

### Advantages of prototyping:

1. Flexible design is easy to integrate new features.
2. Easy to find errors over the course of development.
3. We are able to find missing functionality easily.
4. Ideal for an online system as we can use the user feedback.
5. There is scope of refinement in the project .
6. Ensures greater level of customer satisfaction and trust and reliability.
7. It lets the users and the developer understand the project more easily and more deeply.

### Disadvantages of prototyping

1. Prototyping is expensive.

2. Requirements keep on changing over the development period with new changes made by the client.
3. Over the course of development there are a large number of alterations in the project.
4. Customers might become anxious after seeing a prototype and demands for the product to be delivered to them very soon which is not possible.
5. The prototyping system can be very complex and confusing for the user and the developer as well.
